THE CAMP SITE BENEATH THE CRAVENS HOUSE PORCH

Jeffrey L. Brown
THE CAMP SITE BENEATH THE CRAWENS HOUSE PORCH

Jeffrey L. Brown

ABSTRACT

Archaeological investigations beneath the porch of the Cravens house on the Lookout Mountain battlefield revealed the presence of a camp site apparently occupied by newspaper writers and artists. The camp site and its contents are described.

Introduction

During the early Fall months of 1863 a small group of northern newspaper reporters and artists calling themselves the "Bohemian Club" endured the Confederate siege of Chattanooga. After the siege was lifted in late November, 1863, the members of the Bohemian Club moved to a new camp on the recently contested Lookout Mountain battlefield. There they bivouaced near the Cravens House while they immortalized and romanticized the "Battle Above the Clouds" (Shanks 1866: 1-15).

The Bohemian Club camp was known as "Camp Harper's Weekly." Harper's writer William Shanks described its rigors.

When the battle was over, the pursuit of the rebels ended, and the army happily in undisputed possession, the pilgrimage to the mountain began; and daily, for months after the victory, whole brigades of the Army of the Cumberland visited the scene of the exploits of their comrades from the Potomac and the Tennessee. The "Bohemian Club," which had barely managed to exist through the long and tedious siege of Chattanooga, glad of newfound liberty, reinforced themselves with a photographer, and established themselves in "Camp Harper's Weekly," which they located on the eastern slope of the mountain near the base of the "palisades," and just above the "White House." Here they painted and photographed, sketched and scribbled, until in the course of time all that was prominent, or picturesque, or interesting, on or of the mountain and the battle, was preserved on canvas or in note-book. Camp Harper's Weekly life, for the three months which the Club endured it, was hardly less horrible than that which they were forced to undergo in Chattanooga. The sweets of liberty, of which in their forced captivity they had formed such vivid impressions, were found to be not so decidedly enjoyable as they had imagined. There

was plenty of pure air away up on the mountain—in fact a little
too much of that good thing; for occasionally the tents in which
the Club slept were blown down in sudden and unexpected wind and
rain storms, and it was no pleasant job to rouse up from slumber
at midnight and pitch them anew (Shanks 1866: 7).

While living at Camp Harper’s Weekly, the Bohemian Club was frequently
visited by Federal occupation troops. These souvenir hunting soldiers, according
to Shanks, virtually destroyed the already battle-damaged Cravens house.

The White House . . . early fell a prey to this passion for battle
trophies which possessed the army at this time. It had been the
scene of the hardest contest of the field, was General Geary's
head-quarters the night of the battle, and the only hospital we had
on the field; it was therefore of great interest, and was consequently
stripped of every thing of the slightest value or interest. When
the Club left camp the 'White House' was in ruins (Shanks 1866: 3).

Archaeological excavations beneath the porch of the Cravens house in the
summer of 1975 revealed evidence of post-battle occupation by members of the
Bohemian Club. This evidence consisted of a rough circular stone hearth and a
scattering of artifacts and animal bone within a 60 square foot area (FIGURE 1,
Tables 1 and 2). These materials lay on the surface of topsoil horizon buried
beneath nearly a foot of post-Civil War fill (FIGURE 2).

Stratigraphy and historic documentation provide evidence for dating the
remains. As the site has been covered by a porch since 1866, we can safely
assume that it was occupied and buried prior to 1866 (Cravens 1911). The pres-
ence of a Civil War Minie bullet on the surface of the buried topsoil level
adjacent to the fire place indicates that the camp site surface was exposed
during the Battle of Lookout Mountain. Fragments of burned planks and 103
machine cut nails found in the ash of the fireplace indicate that planking from
the house was burned as fuel. As Shanks states that the house was vandalized
shortly after the battle, it is reasonable to assume that the camp site dates
from the immediate post-battle period.

Several pieces of pencil lead were recovered from the fireplace. An artist's
paintbrush ferrule was found on the outer margin of the scattering of animal bone
that partly surrounded the fireplace. The recovery of artifacts used for writing
and painting strongly suggests that the camp site can be attributed to the Bohemian
Club writers and artists of Camp Harper's Weekly.

An iron door bar found near the fireplace provides additional evidence of
the destructive activities of the camp occupants. When found, this artifact was
partly coated with finely powdered charcoal and was noticeably scaled from contact
with intense heat. Seven connected links of handwrought iron chain were located
near the door bar. A similar chain is still attached to a doorframe in the cellar
of the Cravens house. The door bar and chain, then, may be the discarded remains
of a door that was broken up and burned by the members of the Bohemian Club.

Opossum, fish, calf, and young pig (?) bones were found in and around the
fireplace. These bones, obviously food remains, indicate a diet at least partially
dependent on hunting and fishing. The highly deteriorated, yet uncharred, con-
dition of most of these bones suggests that they may have been boiled. The shape
of the ash heap within the fireplace provides an additional clue to the method of
cooking. The ash heap is clearly circular, rather than irregular. An irregular
form would indicate burning in an open fireplace. The circular form suggests
that the ashes may have fallen from a circular stove grate. Neither the stones
surrounding the ashes, nor the ground surface beneath the ashes bore evidence of
heating. This fact would appear to add credence to the stove hypothesis.

A .22 caliber short cartridge case was discovered near the fireplace. As
.22 caliber ammunition was more typical of civilian than military use during the
Civil War, the campsite specimen is another minor bit of evidence supporting the
idea of Bohemian Club occupation.

Unfortunately, not all archaeological evidence supports ascription of the
campsite to members of the Bohemian Club. Seven female clothing items were
found in a fairly well-defined cluster close to the fireplace. These items
include a leather ballerina slipper sole, a portion of a rubber hair pin, an
eye from a hook-and-eye set, an iron button and three straight pins. These arti-
facts may have been the possessions of one of the female members of the Cravens
family and may not be directly associated with the artifacts deposited by the
assumed Bohemian Club occupants of the camp. Other artifacts found within the
camp site but having only uncertain association with it, are two ceramic sherds,
a broken goblet stem, a small handwrought iron bar of unknown use, and a mother-
of-pearl fragment, probably from a knife handle.

Documentary evidence is also not totally consistent with the Bohemian Club
interpretation of the camp remains. Shank's account of Camp Harpers Weekly places
the camp site on the mountainside just above the Cravens house site. It is not
unreasonable to assume, however, that at various times some members of the camp
might have lived at locations other than the one specified by Shanks. This would
have been especially true in cold weather when the handy supply of firewood at
the house site would have been an attraction.

In spite of some inconsistencies in the evidence, the Bohemian Club inter-
pretation appears to be in general agreement with archaeological and documentary
data. Assuming that the site can be attributed to Civil War writers and artists,
the evidence gained by its discovery adds a dimension to our understanding of the
life of "media" men during the Civil War. The difficulties of life at Camp Har-
pers Weekly, superficially described by Shanks, are given added and specific
emphasis by the meager camp site remains.
