Understanding Assistive Programs: Evaluating the Impact of Various Math Services on Student Performance
Austin Melzer, Yasmin Ayala-Johnson, Stella Arnesen, Scott Kirby, Elise Haylett, Jessica Harris, Andrea Reubens, and Shawn Bergman
Appalachian State University

Background
- Math 1 performance can have large impact on future educational success.
- Determine role of math services on students’ Math 1 performance.
- Effects of services will be measured by EOG and grades in Math 1 course.

Research Questions
1. Do GEAR UP’s math services benefit students in EOG testing and course performance? 
2. Which math focused services are most effective in improving student performance?

Data Methods
- Data collected from 11 school districts in rural area of NC
- How do math services affect students’ performance.
- Determine which services correlate with Math 1 success.
- How levels of involvement in math services are related to Math 1 success.

Implications
This research will shed light onto the best implementation of math services in middle and high schools.
